Nuclear receptor interaction protein, a coactivator of androgen receptors (AR), is regulated by AR and Sp1 to feed forward to activate its own gene expression through AR protein stability
Chen, P., Tsao, Y., Wang, C., Chen, S. (2007) *Nucleic Acids Research*.

ABSTRACT
Previously, we found a novel gene, nuclear receptor interaction protein (NRIP), a transcription cofactor that can enhance an AR-driven PSA promoter activity in a cell-specific manner in prostate cancer cells. Here, we investigated NRIP expression in a cell-specific manner in prostate cancer cells. We cloned a 413-bp fragment from the transcription initiation site of the NRIP gene that had strong promoter activity, was TATA-less and GC-rich, and, based on luciferase reporter assays, contained one androgen response element (ARE) and three Sp1 sites (Sp1-1, Sp1-2, Sp1-3). Transient promoter luciferase assays, chromatin immunoprecipitation and small RNA interference analyses mapped ARE and Sp1 sites to the NRIP promoter. These results suggest that NRIP expression is induced by androgen and Sp1. ... [Show Full Excerpts](#)

FULL-TEXT EXCERPTS
...interaction protein (NRIP) (GenBank™ accession numbers AY756164 and AY756165). NRIP contains 860 amino acids and seven copies of WD40 domain. NRIP expression is restricted to the cell nucleus (8). NRIP enhances transcription activity of either AR or GR via ligand-dependent interactions (8). We also found that NRIP expression can be induced in prostate cancer cells (LNCaP) treated with androgen. Therefore, whether gene expression of NRIP is induced by hormone androgen is interesting research... [Show Full Excerpts](#)

Potent activity of the Hsp90 inhibitor ganetespib of androgen receptor status or variant receptor e
Authors: He, Suqin, et al.
Journal: International journal of oncology, 2012
Moreover, Hsp90 is essential for the stabilization of androgen receptor (AR) and is causally implicated in the pathogenesis of prostate cancer.

Abstract

Gene term, Event term, Cancer term

Caveolae are specialized plasma membrane subdomains with a distinct lipid and protein composition, which play an essential role in cell physiology by performing trafficking and signalling functions. The structure and functions of caveolae have been shown to require caveolin-1, a major protein component of caveolae. **(1) Caveolin-1 expression and secretion are increased in metastatic prostate cancer, and caveolin-1 seems to contribute to prostate cancer growth and metastasis.** Recently, a cytoplasmic protein named PTRF (Polymerase I and Transcript Release Factor) or cavin-1 was found to be required, in concert with caveolin-1, for the formation and functions of caveolae **(2) Genetic ablation of PTRF results in loss of caveolae while caveolin-1 is still expressed, albeit at reduced level, but associates with flat plasma membrane.** **(3) In metastatic PC3 prostate cancer cells that express abundant caveolin-1 but no PTRF, heterologous PTRF expression restores caveola formation and caveolin-1 distribution (Hill et al., 2008 ; Cell 132, 113-124).** We now show that PTRF^{\ -1} - expressing PC3 cells exhibit decreased migration, and that this effect is mediated by reduced MMP9 production PTRF^{\ -1}, and to a lesser extent, cavin-2, -3, and -4 all decreased MMP9 We further show that the PTRF^{\ -1} - mediated reduction of MMP9 production is independent of caveola formation **(4) Taken together, our results suggest that PTRF^{\ -1} expression alters prostate cancer aggressiveness.**

 - Extract complex events among genes and proteins from biomedical literature
 - Require named entity recognition system and sentence parser

Epidemiological studies and prevention trials suggest selenium is a promising preventive agent for prostate cancer. Selenium-containing compounds inhibited the growth of prostate cancer cell lines including androgen sensitive LNCaP and androgen insensitive DU145 and PC3 cells in vitro. Previous study revealed a novel mechanism of selenium action in which selenium (methylseleninic acid (MSA)) markedly reduced androgen receptor (AR) signaling in prostate cancer cells , suggesting that selenium might act as an antiandrogen , which could serve as a therapeutic agent for prostate cancer. In this study , we tested whether selenium (methylselenocysteine (MSC)) affects tumor growth of human prostate cancer cells by targeting AR signaling in vivo. Prostate tumor xenografts were established in nude mice by co-inoculating LNCaP cells with Matrigel. The mice-bearing tumors were treated with or without MSC (100 microg\) via intraperitoneal injection for 2 weeks. The effect of MSC on tumor growth , AR , and prostate-specific antigen (PSA) expression was examined. Methylselenocysteine (MSC) significantly inhibited LNCaP tumor growth (P < 0.05). AR expression in tumor tissues and serum PSA levels were considerably decreased in MSC-treated mice compared to the vehicle controls. Pharmacological dose of MSC inhibits the growth of LNCaP human prostate cancer in vivo accompanied by a decrease in the expression of AR and PSA. These findings suggest that selenium (MSC) can serve as a therapeutic agent aimed at disruption of AR signaling for prostate cancer.

The effect of MSC on tumor growth, **AR**, and prostate-specific antigen (PSA) **expression** was examined.

AR **expression** in tumor tissues and serum PSA levels were considerably decreased in MSC-treated mice compared to the vehicle controls.

Pharmacological dose of MSC inhibits the growth of LNCaP human prostate cancer in vivo accompanied by a decrease in the **expression** of **AR** and PSA.

Scoring sentences

- DigSee services the *evidence sentences* with information such that 'which genes' are involved in the development of 'which disease' through 'which biological events'.

Significantly, down-regulation of SOX9 by siRNA in prostate cancer cells reduced endogenous AR protein levels, and cell growth indicating that SOX9 contributes to AR regulation and decreased cellular proliferation.[PMID: 17234760]

- DigSee demotes sentences that do not show relation between gene and disease (For example, explaining an experimental procedure)

To determine the role of CD147 in the invasiveness properties of prostate cancer, we successfully down-regulated CD147 by RNA interference (RNAi) technology, in PC-3 cell line at high level of CD147 expression.[PMID: 16627983]

Scoring sentences: Corpus

- The ranking step measures the relevance of the candidate evidence sentences
- Gold standard data: 207 positive and 356 negative sentences from cancer-related articles

[Feature selection sentences]

Events	Binding	Gene expression	Localization	Phosphorylation	Protein catabolism	Transcription
Positive	11	20	9	19	6	5
Negative	26	20	23	24	24	45
Total	37	40	32	43	30	50

[Performance testing sentences]

Events	Binding	Gene expression	Localization	Phosphorylation	Protein catabolism	Transcription
Positive	18	52	19	18	8	22
Negative	29	46	38	38	17	26
Total	47	98	57	56	25	48

Gene expression event contains positive regulation, negative regulation, and regulation events.

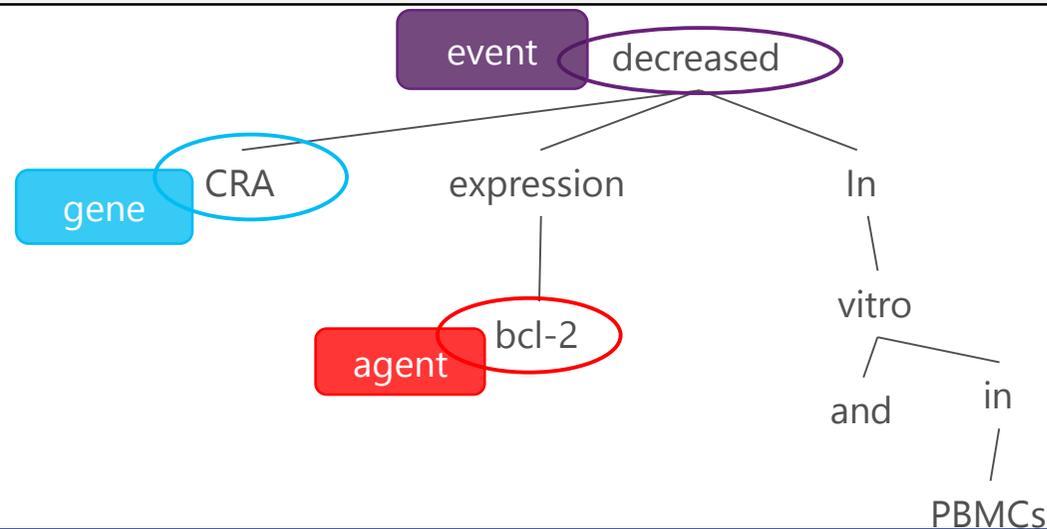

Feature selection rules for ranking evidence sentences

- Based on Turku event extraction system
 - Normalized event SVM score
 - Normalized edge SVM score
- Based on the dependency parser tree
 - Distance between gene and event
 - Distance between event and regulation
 - Distance between event and cancer
 - Event depth
 - Agent
- Based on terms in the sentence
 - Cancer link keyword count
 - Cancer hallmark keyword count: apoptosis, angiogenesis, growth, invasion, metastasis, and proliferation
 - Negative scores (to + infinitive, study-related keywords, negative keywords)

Feature selection rules for ranking evidence sentences

- Based on dependency parser tree
 - **Agent**: the genes that have relations with a query gene in a sentence
 - Since our goal is to find the disease-gene relationship, the sentence only containing events for the *gene-gene relationship* is more likely to be classified as a negative sentence.

CRA decreased bcl-2 expression in vitro and in PBMCs. [PMID: 10561278]

Feature selection rules for ranking evidence sentences

- Based on terms in the sentence
 - Cancer link keyword count
 - # of cancer terms or cancer-related keywords in the sentence
 - Hyponyms and hypernyms of cancer collected from WordNet
 - Cancer hallmark keyword count:
 - Keywords of known characteristic of cancer during its initiation, development, and progress
 - Apoptosis, angiogenesis, growth, invasion, metastasis, and proliferation

Cancer link keyword

Cancer hallmark keyword

Significantly, down-regulation of SOX9 by siRNA in prostate **cancer** cells reduced endogenous AR protein levels, and cell growth indicating that SOX9 contributes to AR regulation and decreased cellular **proliferation**.
[PMID: 17234760]

Feature selection rules for ranking evidence sentences

- Based on terms in the sentence
 - Negative scores : phrases to detect negative sentences
 - to + infinitive: to determine, to find, to assess
 - Study-related keywords: troponym of study from Wordnet
 - Negative keywords: not, never

Negative scores

To **determine** the role of CD147 in the invasiveness properties of prostate cancer, we successfully down-regulated CD147 by RNA interference (RNAi) technology, in PC-3 cell line at high level of CD147 expression. [PMID: 16627983]

Bayesian classifier

- Bayesian model
 - A Bayesian classifier with these features was modeled to identify positive evidence sentences from negative sentences
 - Same prior for positive and negative evidence sentences
 - Likelihood ratio of features

$$L(\text{features}) = \frac{p(\text{features} \mid \text{positive})}{p(\text{features} \mid \text{negative})}$$

- Assuming independency between features except two cases

$$L(\text{features}) = \prod_{\text{features}_i} \frac{p(\text{features}_i \mid \text{positive})}{p(\text{features}_i \mid \text{negative})}$$

$$\cdot \frac{p(\text{cancer keywords} \mid \text{positive, event-cancer distance})}{p(\text{cancer keywords} \mid \text{negative, event-cancer distance})}$$

$$\cdot \frac{p(\text{agent} \mid \text{positive, hallmark keywords})}{p(\text{agent} \mid \text{negative, hallmark keywords})}$$

Accuracy evaluation of identifying evidence sentences
